## **Customer Reviews**

This is a book in a series of books that I got for my six year old. My kids love science and I try to read to them during the sporting events instead of them playing video games. The books in this series have wonderful pictures along with little facts that go along with them. The words are easy for readers that have been reading for a couple of years but if your child is too young for that this book is great to read to them! The book is written in plain terms that kids can understand. It's a great way to introduce science facts to kids. Each book in this series introduced one particular aspect of science and portrays it in a way that makes kids want to learn more. I plan on recommending this series for the pre-K teacher at my son's school who loves to introduce the kids to science. The photos are amazing! While I read the book to my kids it was very easy to get

lost in the pictures and wondering what it would be like to see them in real life. The facts were great and my kids learned a lot from it but the pictures were what make this book exceptional. I would recommend this book to anyone with kids. If you kids are too young to listen to the book being read let them look at the pictures. They are so vivid you can almost imagine yourself there! I received this book at a free or reduced price in exchange for providing an honest and unbiased review. **Solar System for Kids : The Sun and Moon: Universe for Kids (Children's Astronomy & Space Books)**

The book **Solar System for Kids: The Sun and Moon** is one of the books in a series of educational books written by Professor Baby and published by Speedy Publishing. This book, which is a part of the **Children's Astronomy & Space Books** series, provides children with a chance to learn about astronomy in a fun and exciting way. These books are filled with exceptional photographs and content geared towards capturing a child's attention span. Easy and fun to read! These books are excellent for use in the classroom or at home. Excellent tool to help children not only learn about astronomy, but it helps to encourage them to read as well. This colorful short book provides children with a brief overview on the two objects in the solar system that influence Earth the most. Beautiful, detailed, colored photos along with age appropriate descriptions and fun facts about what the sun is, what it's made of, and how old it is, how long the moon takes to orbit the Earth and the temperature of the moon can all be found in this book. These books are great conversation starters for children. The beautiful pictures open up a dialogue for children to express what they see and what they understand by looking at the photographs. Finally, a good tip for parents- these books are great for bedtime! Quick and easy to read, while also providing a little education to your child. I viewed the Kindle version of this book. I was able to successfully download and open the book with my Kindle App with no problems or difficulty. I received this book at a discount in exchange for my honest review. I haven't received any kind of compensation and I am not required to give a good review. I am also not associated with the seller or publisher in any way. The pictures in this book are awesome! The format for this book is similar to most of the Baby Professor books in this series which have a picture with a paragraph and facts on one page. Then the next page is just a photo. It would have been very simple to either add additional information about the attraction or better yet, have an entire different attraction and description on that page. I've come to realize that these Baby Professor books usually have something that could easily make them better, but so many of these books are offered for free and the pictures really are amazing, so

it's tough to complain. There are about 200 books in this ebook series that are offered in the kindle store for either free or for .99¢. You can't really go wrong with the books offered for free. There is a variety of subjects covered and most of the books follow about the same format. You can take a peek inside the books by clicking "Look Inside" and this is pretty much what you get in each book. Anyway, overall, I do like these books for their wonderful pictures. It would be nice if the books went into more detail but they are very basic books that I hope will get my kids interested in finding more about each subject. I plan on keeping these books on my iPad for down time for my kids when they get bored waiting different places like the doctors office or practice for a sibling. I sometimes watch a friend's 3 year old daughter and she likes to look through the pictures on my phone. I plan on showing her these books to keep her entertained. I think she will love them.\*\*\*\*\* I received this ebook for free in exchange for my honest review. \*\*\*\*\*

This is an excellent ebook for kids! As a teacher of elementary students, I would love to incorporate this ebook into a small group activity where I present a main idea or topic to the whole class and then they break up in small groups and discover more material on their own. My mind was continuously racing as I read through this book thinking of different projects I could make on this topic. It is the perfect age group to let them use a kindle to explore and what a better way to do so than with this ebook! I will totally let other teachers know of this opportunity and will keep this seller in mind with other ebooks available. I received this product free for reviewing purposes, however my opinions are all my own.

The Solar System for Kids: The Sun and Moon is an excellent starter book for an emergent reader. Beautiful pictures accentuate the text. The text is not too overwhelming, only a couple of sentences of information for every other page, the opposite page is the aforementioned pictures. Quite a short book, only around 14 pages of story with a few copyright and heading pages. I received this book at a discount for my honest review, I was not compensated in any way except to add another Baby Professor book to our growing library.
