My First Human Body Book

Synopsis

Here's the most entertaining way for children to learn how the human body works: 28 fun and instructive, ready-to-color illustrations that explore the muscular, skeletal, nervous, digestive, respiratory, and immune systems. Kids will discover how their voice box works, how many bones they have, how thousands of "tasters" on their tongues help them distinguish flavors, how the DNA in their cells is different from everyone else's, and so much more. Filled with astonishing details, this head-to-toe survey of the body is fascinating to read and fun to color!

Book Information

Paperback: 32 pages

Publisher: Dover Publications; Green ed. edition (January 19, 2009)

Language: English

ISBN-10: 0486468216

ISBN-13: 978-0486468211

Product Dimensions: 0.2 x 8 x 10.8 inches

Shipping Weight: 4.2 ounces (View shipping rates and policies)

Customer Reviews

An accomplished science and nature illustrator, Patricia J. Wynne is the recipient of the 2008 Theodor Seuss Geisel Honor and has won awards from Parenting Magazine, the John Burroughs Association, and the National Science Teachers Association. Patricia's artwork has appeared in galleries, magazines, newspapers, and more than 100 books for both children and adults. She is the author of numerous successful Dover titles on science and design.

I bought this for my five year old and she loves it, but it is a little complex...she colored it for the most part, but I did help. If your child cannot color in the lines yet, or doesn't understand color contrast, then this is not the book for you. I would recommend this for older children (8+). However, I LOVE

this book because it gave me the perfect supplement to our "My Body" unit that we started a few months ago. Each page became a launching point for talking about anatomy and physiology...two subjects my daughter is fascinated by.

Very disappointing. It's not a book, it's just a thin booklet.No colorful illustrations, it's all black and white, supposedly for coloring by the kids.In reality, my 7 year old son (who is very interested, and asked to get a book on the human body), tossed it away after 12 seconds. His younger brother (5 yr old) also wasn't interested. They would not even consider coloring it.I insisted on sitting and reading it together, and found it was not clear, stimulating or fun. My son didn't learn much.For us, it was a waste of time and effort, I'll look for better books out there.

This would probably be okay for older kids, but too detailed for early elementary. The info given on each page is also too vague.

This book is ok. A lot of the pages were still stuck together and had to be ripped apart.

Purchased this as part of our homeschool curriculum and my first grader loves it.

I'm not sure how I misread that, but it's a coloring book and it's awesome! I need to find more books like this. Very entertaining! Bought it for a homeschooling lesson and kindergartener loves it!

I am using this book with 9-12 grade special needs students. I like the details and close-ups of the various body systems. I also like that this is a coloring book. They will have fun discovering all of the fascinating systems of the human body. I have also shared it with a fellow teacher who works with the deaf and hard of hearing. Thanks!

good book but my grandson lost interest in it.
