Dinosaur Bones (Let's-Read-and-Find-Out Science 2)

Synopsis

How do we know what dinosaurs were like? Dinosaurs roamed the earth millions of years ago. Then suddenly they all died out. How do we know now what they looked like? How do we know that they really existed at all? Read and find out how scientists have proven the existence of dinosaurs by studying fossil remains. Each new fossil find helps them to piece together a picture of what the world was like millions of years ago.

Book Information

Lexile Measure: 460L (What's this?)

Series: Let's-Read-and-Find-Out Science 2

Paperback: 32 pages

Publisher: HarperCollins; unknown edition (March 10, 1990)

Language: English

ISBN-10: 0064450775

ISBN-13: 978-0064450775

Product Dimensions: 6.9 x 0.1 x 8.9 inches

Shipping Weight: 3.5 ounces (View shipping rates and policies)

Average Customer Review: 4.1 out of 5 stars 6 customer reviews

Best Sellers Rank: #935,930 in Books (See Top 100 in Books) #75 in [Books > Children's Books > Geography & Cultures > Archaeology](#) #1120 in [Books > Children's Books > Animals > Dinosaurs](#) #11175 in [Books > Children's Books > Science, Nature & How It Works](#)

Age Range: 4 - 8 years

Grade Level: Kindergarten - 4

Customer Reviews

The latest Let's-Read-and-Find-Out Science book is written in the lively and informative style of Aliki's *Digging Up Dinosaurs* and *Dinosaurs Are Different*, with the added personal perspective of *My Visit to the Dinosaurs*. Here Aliki helps children understand that our knowledge of dinosaurs began less than 200 years ago, when Mary Ann Mantell discovered fossilized dinosaur teeth in a pile of rocks near an English quarry. The major findings of other scientists are included as well. Aliki has a perfect sense of just which details will most delight her readers: dinosaur footprints, a banquet held inside a life-size dinosaur model. Full-color illustrations of curious, questioning people and their discoveries make a treasure hunt of this fact-filled volume. Ages 4-8. Copyright 1987 Reed Business Information, Inc. --This text refers to an out of print or unavailable edition of this title.

PreSchool-Grade 2 There's nothing intrinsically wrong with this latest Alike contribution to dinomania; it's just that it all seems a bit familiar. Some of the information appears to be culled from Ali ki's earlier (and admittedly, drabber) books. Other pages seem similar in con tent to Alike's more recent volumes. Still, she has managed to provide a sim plified explanation of the history of paleontology in a format that even pre schoolers will comprehend. She reiterates much basic information about the separation of the continents, earth's time periods, and how scientists reconstruct dinosaurs from fossilized bones. Little information is provided about more recent dinosaur discoveries. Like the text, the illustrations in this book are reminiscent of other recent Alike books on prehistoric life. Overall, this is a good book, but one which may duplicate information avail able in others. Cathryn A. Camper, Minneapolis Public LibraryCopyright 1988 Reed Business Information, Inc. --This text refers to an out of print or unavailable edition of this title.

If your kids love dinosaurs/paleontology, PLEASE get them Alike books. They are SUPER wonderful. I grew up with them, and despite a little outdated information and dinosaur posing (from old museums), they are still a treasure.

Terrific book.

I got this for my grand-nephew for Christmas, and he absolutely loves it.

DINOSAUR BONES is a short book about dinosaurs that is at the mid-elementary reading level. It's a book with fun but not spectacular artwork. The book talks about how people discovered the existence of dinosaurs. How people found 'strange bones' that they couldn't classify, and how this lead to discovery the ancient world of dinosaurs. Continental drift and rock stratification is touched up. And Alike talks about how dinos first appeared in the late Triassic period and how they grew larger and the centuries passed. Triassic Cretaceous, and Jurassic periods are introduced. WHAT I LIKED about the book is the presentation that seems to allow children to learn as much as they are ready for, or interested in. They can just skim and pick up on general ideas, or they can look and study the charts and learn more details, like which era comes first. Finally, I love that the book ends with the mysterious WHY of dinosaur extinction. I would hope that this would leave young dino enthusiasts with the idea that there is scientific work left to be done in the field, and that they could be a scientist-discoverer when they grow up.

Nice and valuable. fast shipping, If you have only one product, this is the one to have very good .
send to my son,

My 5 year old loves this book! It's nicely illustrated and perfectly grabs the attention of young children who are interested in science and dinosaurs.
