Asset Building & Community Development

Synopsis

A comprehensive approach focused on sustainable change. Asset Building and Community Development, Fourth Edition examines the promise and limits of community development by showing students and practitioners how asset-based developments can improve the sustainability and quality of life. Authors Gary Paul Green and Anna Haines provide an engaging, thought-provoking, and comprehensive approach to asset building by focusing on the role of different forms of community capital in the development process. Updated throughout, this edition explores how communities are building on their key assets—physical, human, social, financial, environmental, political, and cultural capital—to generate positive change. With a focus on community outcomes, the authors illustrate how development controlled by community-based organizations provides a better match between assets and the needs of the community.

This is a required text book for an Eastern Kentucky University Master's program. The print is very small, but the information is easy to consume and process. This is a text book that is actually being enjoyed during the learning process. I would have liked a bit larger text, though. After several hours of reading, the small text can be very eye strenuous. Other than that, this book is being enjoyed during the class.
