The Impotence Epidemic: Men's Medicine And Sexual Desire In Contemporary China (Critical Global Health: Evidence, Efficacy, Ethnography)

Synopsis

Since the 1990s China has seen a dramatic increase in the number of men seeking treatment for impotence. Everett Yuehong Zhang argues in *The Impotence Epidemic* that this trend represents changing public attitudes about sexuality in an increasingly globalized China. In this ethnography he shifts discussions of impotence as a purely neurovascular phenomenon to a social one. Zhang contextualizes impotence within the social changes brought by recent economic reform and through the production of various desires in post-Maoist China. Based on interviews with 350 men and their partners from Beijing and Chengdu, and concerned with de-mystifying and de-stigmatizing impotence, Zhang suggests that the impotence epidemic represents not just trauma and suffering, but also a contagion of individualized desire and an affirmation for living a full life. For Zhang, studying male impotence in China is one way to comprehend the unique experience of Chinese modernity.

Book Information

Series: Critical Global Health: Evidence, Efficacy, Ethnography

Paperback: 304 pages

Publisher: Duke University Press Books (March 6, 2015)

Language: English

ISBN-10: 0822358565

ISBN-13: 978-0822358565

Product Dimensions: 6 x 0.8 x 9 inches

Customer Reviews

"Based on over 10 years of field research and writing by a greatly sensitive and skilled ethnographer who himself grew up in China, *The Impotence Epidemic* tells the story of contemporary China, from the Maoist era to the present, through the Chinese medicine conception of the lived body and popular Chinese understandings of how masculinity, sexual desire, and performance act as embodied metaphors of key cultural tensions and crises. Theoretically and ethnographically rich. A

remarkable achievement!" (Arthur Kleinman, coauthor of *The Ground Between: Anthropologists Engage Philosophy*) "Everett Yuehong Zhang's ethnography about impotence is a tour de force. Repressed during the Cultural Revolution, sexual desire is today enhanced by doctors of nanke (men's medicine) who use an eclectic mix of herbal medicine and Viagra. By embedding the experience of impotence in specific historical, social, and political moments, with moveable moral implications, this sensitive subject can no longer be thought of simply as a failed & neurovascular event." (Margaret Lock, coauthor of *Beyond the Body Proper: Reading the Anthropology of Material Life*) "[A] welcome contribution to the emerging body of valuable work that explores male reproductive identities and modalities through multidisciplinary approaches. The book is valuable for researchers, experts and scholars trying to pursue multidimensional methodological studies that superbly combine history, anthropology, ethnography and medical studies." (Sonia Wigh Centre for Medical Humanities 2016-01-27) "The many life stories of trauma and unhappiness resulting from real or imagined sexual impotence presented here are often touching and depressing, but Everett Zhang has managed to skilfully weave these individual cases to produce an overall picture of men and women seeking ways to satisfy their desires rather than accepting their lot. . . . I applaud the optimistic and thoughtful tone he has adopted, and I fully recommend the book to anyone interested in China or how human beings cope with misfortune. ... [T]he topic is not a joyous one, but the book is a pleasure to read and I have no doubt it will be cited for years to come." (Kam Louie *The China Quarterly* 2015-09-01) "[A] beautifully written and intellectually stimulating ethnography on a controversial topic that few anthropologists have examined. ... Drawing on rich ethnographic data, well-structured methodologies, and insightful interpretations of China's recent social changes, Zhang debunks many popular and scholarly stereotypes about male impotence. ... I would strongly recommend this book to scholars and students who are interested in medical anthropology, health, sexuality, gender, modernization, and Chinese studies." (Xia Zhang *Anthropological Quarterly* 2015-07-01) "Written in a clear and lucid manner, *The Impotence Epidemic* is suitable for courses in medical pluralism, the anthropology of the body, and gender and sexuality in Chinese culture." (Howard Chiang *Medical Anthropology Quarterly* 2016-02-01) "Zhang's ability to weave the history of these complicated periods into his study on impotence in a manner accessible to both Chinese specialists and non-specialists alike is a particular strength of the book.... Zhang's work is an important contribution to our understanding of the study of masculinity, sexuality, medicine and social policy in contemporary China." (Melissa S. Dale *Social History of Medicine* 2016-04-06) "Ethnographically engaging and rich, this book contributes to the anthropological debates on health, sexuality and medicine.... [T]his book will be

welcomed by a wide array of scholars interested in topics such as gender, sexual desires, impotence and Chinese medicine in China and beyond." (Tiantian Zheng *The Asia Pacific Journal of Anthropology* 2016-03-30)"The Impotence Epidemic offers a nuanced, sensitive, and powerful ethnographic analysis of impotence in contemporary China.... It will be of interest to scholars who focus on ethics and morality, gender and sexuality, body and society, modernity, the interplay between traditional Chinese medicine and biomedicine, and China's post-socialist transformation." (Jie Yang *American Anthropologist* 2016-12-05)

Everett Yuehong Zhang is Assistant Professor of East Asian Studies and Anthropology at Princeton University. He is the co-editor of *Governance of Life in Chinese Moral Experience: The Quest for an Adequate Life*, and co-author of *Deep China: The Moral Life of the Person*.

Everett Zhang was conducting fieldwork in two Chinese hospitals, documenting the reasons why men sought medical help for sexual impotence, when Viagra was first introduced into China's market in 2000. He therefore had a unique perspective on what the media often referred to as the "impotence epidemic", designating both the increased social visibility of male sexual dysfunction and the growing number of patients seeking treatment in nanke (men's medicine) or urological hospital departments. At the time of Viagra's release, Pfizer, its manufacturer, envisaged a market of more than 100 million men as potential users of "Weige" (Great Brother) and hoped to turn China into its first consumer market in the world. Its sales projections were based on reasonable assumptions. The number of patients complaining from some degree of sexual impotence was clearly on the rise, reflecting demographic trends but also changing attitudes and values. There was a new openness in addressing sexual issues and a willingness by both men and women to experience sexually fulfilling lives, putting higher expectations on men's potency. Renewed attention to men's health issues since the 1980s had led to the creation of specialized units in both biomedical hospitals and TCM (traditional Chinese medicine) clinics. There was no real competitor to Pfizer's Viagra, as traditional herbal medicine or folk recipes clearly had less immediate effects in enabling sexual intercourse. And yet Viagra sold much less than expected. In hospitals and health clinics, Chinese patients were reluctant to accept a full prescription. Instead, they requested one or two single pills, as if to avoid dependence. The drug was expensively priced, and customers were unwilling to sacrifice other expenses to make room in their budget. In addition, Viagra did not substitute for traditional remedies, but rather developed in tandem with them as people switched between Viagra and herbal medicine, taking both for seemingly compelling reasons. Viagra

addressed the issue of erectile dysfunction, and its bodily effects were clearly experienced by Chinese men who reacted to it in much the same way as male subjects elsewhere. But it did not bring an end to the "impotence epidemic", which continued to be framed as more than a health issue by the Chinese media. Viagra did not "cure" impotence or restored men's potency because it was unable to do so. Pfizer's projected sales figures had been based on false assumptions, and the Chinese market proved more resistant than initially envisaged. Zhang proposes a compelling theory of why it was so, thereby demonstrating the value of a fieldwork-based anthropological study as distinct from other types of scholarly explanations. In contrast to the dominant biomedical paradigm, he rejects the notion that male potency can be reduced to the simple ability to achieve an erection. Impotence is much more than a bodily dysfunction or a "neuromuscular event": witness, as Zhang did, the despair of men who complain of having lost their "reason to live", or the frustration of women who accuse their companion of having become "less than a man". But impotence is not only a metaphor, as some cultural critics would have it. Impotence is often presented as the symbol of a masculinity in crisis or as a sign of the "end of men" and the rise of women in postsocialist China. But these generalizations do not reflect the practical experiences of impotent men, nor do they explain why the demand for more and better sex resulted in anxiety for some men, leading to impotence. "In fact, notes the author, none of the discussions surrounding Chinese masculine crises was either soundly conceptualized or empirically supported." Zhang's fieldwork confirmed the rise of women's desire or increased people's longing to enjoy sex throughout their adult life, but did not go as far as to validate the claim of an "impotence epidemic" or to testify to a "new type of impotence". During the Maoist period, people were discouraged from seeing doctors about impotence, as sexuality was repressed and the desire for individual sexual pleasure was regarded as antithetical to the collective ethos of revolution. If anything, patients came to consultations to complain about nocturnal emissions (yijing), a complaint that more or less disappeared in the post-Maoist era. When men's health clinics or nanke departments emerged in the new era, they medicalized impotence and established it as a legitimate "disease" warranting medical attention. Private selves emerged when the overall ethos of sacrifice and asceticism gave way to the exaltation of romantic love and then to the justification of sexual desire and pleasure. But structural impediments to sexual desire did not disappear overnight, such as the physical separation of married couples and other constraints on intimacy induced by the danwei (work unit) and hukou (household registration) systems. Other biopolitical interventions created gaps between the revolutionary class and the outcast relatives of counter-revolutionaries, between the urban and the rural or, more recently, between the rich and the poor. The main value of the book lies in its rich collection of life stories and

individual cases of men and women confronted with impotence. The amount of suffering accumulated under Maoist socialism is staggering. People interviewed in the course of this research retained collective memory of starvation during the Great Leap Famine, and feeling hungry was a common experience well into the sixties. Maoist China was a man-eat-man's world, where middle-aged men would snatch food from school children or steal from food stalls to assuage their hunger. It was also a time when children would denounce their parents for counterrevolutionary behavior, or would call their mother by their given name in a show of disrespect in order to draw a clear line between themselves and bad parents. Sexual misery and backwardness also provided a common background. Some of Zhang's interlocutors never touched a woman's hand until they were thirty years old; others confessed that the first time they saw a naked female body was when they saw a Western oil painting of a female body, or when they glimpsed scenes of a classical ballet in a movie. A nineteen years-old girl didn't understand the question when the doctor asked if she had begun *lijia* (menstruation) and thought *lijia* was a foreign word. Many persons consulting for impotence confess that they never had sexual intercourse or had tried to have sex once or twice but failed. Their conviction that they were impotent was based on very limited physical contact with women or was merely a product of their imagination. As Zhang argues convincingly, it takes two to tango; or in words borrowed from phenomenology, "in the final analysis, curing impotence means building intercorporeal intimacy." In paragraphs that could have been borrowed from Masters and Johnson, Zhang describes the various components of sexual intercorporeality: bodies need to be in contact, as in "touching, kissing, licking, rubbing, and so on
