International Shortwave Broadcast Guide: Summer 2017

Synopsis

Teak Publishing Company is pleased to offer for purchase the Summer 2017 International Shortwave Broadcast Guide (ISWBG) electronic book by bestselling author Gayle Van Horn, W4GVH. This all important semi-annual information resource is your electronic guide to the world of shortwave radio listening. Shortwave radio listeners are routinely entertained with unique perspectives to events, music, culture, history, and news from other countries that you won't see or hear on your local or national broadcast channels. Shortwave radio broadcast aren't restricted by country borders or oceans, and can propagate thousands of miles, reaching millions of listeners worldwide, in over 300 different languages and dialects. These worldwide transmissions are monitored on internationally assigned radio frequencies between 1700 kHz and 30 MHz. There are even broadcasts from the dark side, transmitted from broadcasters known as clandestine or clanny stations. Clandestine broadcasters are wrapped in mystery and intrigue, and they usually exist to bring about some sort of political change to the country they are targeting. Programming may largely be half-truths or sometimes even outright lies, but it is essentially propaganda for their cause. Listeners who live in the United States can easily hear shortwave broadcast stations from Canada, China, Cuba, Egypt, France, Germany, India, Iran, Japan, New Zealand, North/South Korea, Saudi Arabia, Taiwan, Turkey, United Kingdom, United States, Vietnam, and many other countries if you have an inexpensive shortwave radio receiver, and you know when and where to listen! If you want to get in on the action, then this electronic book is your ticket to travel the world via radio. The ISWBG is a 24-hour station/frequency guide to all of the known longwave, selected mediumwave and shortwave radio stations currently broadcasting at time of publication. This unique radio hobby resource is the only radio hobby publication that has by-hour station schedules that include all language services, frequencies and world target areas. New in this eighth edition of the ISWBG is an Surfing the Shortwave Radio Bands without a Radio, Summertime Listening on Shortwave. and a feature When News Breaks: Getting Your News from the Front Lines through streaming media. There is also an expanded special feature - Who's Who in the shortwave radio spectrum. This story covers services and frequencies outside the regular broadcast and amateur radio bands, and includes an updated exclusive Hot HF 1000+ non-broadcast frequency list. Also included in this edition is increased frequency and station coverage of longwave broadcasters, selected medium wave broadcast frequencies used by international broadcasters, all known international standard time and frequency stations transmitting worldwide, and selected spy numbers broadcasts. This new e-publication edition is a much expanded version of the English shortwave broadcast guide that was formerly published in the pages of the former Monitoring Times

magazine for well over 20 years. This one of a kind e-book is published twice a year to correspond with shortwave station's seasonal time and frequency changes. The International Shortwave Broadcast Guide will have wide appeal to shortwave radio hobbyists, amateur radio operators, educators, foreign language students, news agencies, news buffs, or anyone interested in listening to a global view of news and major events as they happen. Whether you are an amateur radio operator or shortwave radio enthusiasts, and want to get in on the action outside of the ham bands, then this new electronic book from Teak Publishing is a must reference in your radio electronic reference library.

Customer Reviews

This excellent resource is so much more than just a time and frequency guide - the articles cover a multitude of topics including a great overview of web SDRs, some program overviews and some excellent "how to" articles. It costs less than a good supply of batteries and is well worth the investment, especially if you think there is nothing interesting on the air anymore (this guide proves that there still are programs worth following). Kudos to Gayle and the rest of the team.

Nice to have a listing of all broadcasters on the shortwave channels. The listings are by Greenwich Mean Time, or UTC. If you are looking for a particular broadcaster, you will have to do some searching, and it will take a while.

There is still a lot to hear on the over-the-air analog shortwave radio bands. This book, updated more or less quarterly, will help you hear it. Good comprehensive frequency listings. A must-have for those of us who refuse to totally succumb to digital media.

A great source and informative read.

It's a simple tool but works exactly as advertised and feels sturdy and well built I'm VERY happy with my purchase and bought another set! unique and awesome Prompt delivery and super service. Just wanted I was hoping for and more. I have recommended this product to several of my friends and family.
