“Highly imaginative and hilarious . . . a must-have for any collector out there.” —Alien Bee

Daniel Picard combines work and play in his series of whimsical figure art, bringing collectibles to life in countless imaginative ways. His dynamic portfolio of photography extends across genres,

including pop culture, sports, and portraiture.

This is a great book, which collects the unique images of Daniel Picard. You do not have to be a fan of these pop culture references, but it certainly helps. Picard uses Sideshow Collectable action figures, which are very expensive and very detailed, and stand about 12" tall. They are not really toys; they are display-worthy figures designed for adults. I do not own any (out of my price range), but I do have a collection of figures on my desk. He mainly uses figures from Star Wars, GI Joe, and the DC Universe, such as Batman and Joker. There are a few other figures, but these are his main subjects. Picard takes these 12" figures and photographs them in unique settings. For example, there is a Stormtrooper at an office desk with paper surrounding a basket (because as everyone knows, Stormtroopers have bad aim). Or a Snowtrooper plowing snow in his drive way. Or a picture of the Joker building a Batman Lego set. There are many things that makes these photos amazing. First, every scene is of a real figure. Second, and most importantly, he shoots these images and combines them in Photoshop to create a perfectly lit and perfectly scaled scene. If you look at the image, you might think it was a person in a costume, and you have to remind yourself that these are all action figures. This is the kind of book you have to look at to appreciate. Finally, the best part of the book is the irony Picard creates with each image. If this matches your sense of humor, you will laugh. I thought the Joker pics were the best. The Joker is shopping for a Halloween costume...and is looking at a Batman suit. The Joker is in a museum...and taking a selfie with a Batman bust. The Joker is taking a picture...of Harley Quinn doing a handstand on some rocks. Moments like this occur on every page. This gives the book an immense amount of charm. And as it turns out, these pictures can tell a story. I showed my 5 year old son these pictures, and before I knew it, I was telling a story about the image. There were no words on the page--just my imagination describing why Yoda was sending a text message as he force-pushes some Stormtroopers. And if you do this for each image, you actually have a pretty good book to "read." I have gone through each page more than once, admiring Picard's photograph skills, as well as his Photoshop composition skills. Yes, I wish there was more insight into how he did all of this. I wish there were a few more of his quotes to accompany each picture. As it stands, I am very happy I bought this book, and it is well worth the price. I look forward to a sequel set of pictures, and finding out how these action figures "survive" in the real world.

I have been thinking about a loot crate subscription for some time. When I saw this book in a review I wanted it but the month that loot crate offered had past. Glad I still got the book. Great artwork,

cool concept and the price was right. It's limited edition because only so many were sent out and they are generally easy to find NOW because some people received them and didnt want them but as time goes on I see the value increasing because of exclusivty.

Though the book is small, the author presents his Sideshow Collection in various poses through the use of his photography techniques. These poses are of everyday life in "What if" scenarios. They are humorous and at times impressive. I do wish the book was bigger in size so I do hope in future editions are his next book will be more epic. This is a must buy for any Sideshow or Hot Toys collector.

I enjoyed this book immensely. I am a collector of miniatures and I noticed I was gravitating from taking the figures out of "battle" situations and into more "normal" settings which can also be hilariously. I am also a photographer who was also moving towards shooting more macros. Daniel Picard's book crystallized what I wanted to do but never quite understood where I was headed. Looks like I have found a new focus.
