Customer Reviews

I am a Hospitalist NP and have used this book from day #1. It has precise information regarding the most common reasons for adult hospitalization along with algorithms to reference quickly when needed. It starts with ACLS algorithms, and continues to general internal hospital medicine and even perioperative consultation. It has small print, so reading glasses may be required for us older folks, but the paperback version is great as it fits in my lab coat pocket or even my scrub pockets without adding much weight. I also precept Acute Care Nurse Practitioner students and have recommended this to the students as well. As students, they have found this book extremely helpful as it carries much information needed without having to fumble through several apps and

pocketbooks.

Overall it's good. But lacking some common hospital diagnoses like cellulitis so I'm a little disappointed.

Not as useful to me as the Pocket Medicine from MGH is - just a personal preference, no reflection on Tarascon.

Great book, highly recommended. Goes into great detail about certain diseases that many may not have much experience with.

Currently a full time hospitalist and part time run a perioperative clinic. This is the first pocket reference I've used actually using the current periop cv evaluation guidelines which utilizes the revised cardiac risk index/2007 ACC guidelines. Briefly skimming other areas also had nice, to-the-point medications/dosages for treatment options (secretions at the end of life, myxedema coma, and so on). Not bad for a '1st edition' Now where's the easy to use PDA version?

Excellent item.

Good book, but the first time I opened the book, the entire binding came apart. Pages were literally falling out on the hospital floor.

Book came with unglued binding and pages all coming out. Disappointing
